

MICRODERMABRASION

Pricing:

This procedure costs \$100 for a 30 minute treatment. To achieve the best results, it is recommended that a treatment be performed every 4 weeks.

What to Expect:

The medical aesthetician will cleanse the skin and then perform the treatment. After the procedure, a moisturizer and SPF will be applied.

Recommended Treatment:

Microdermabrasion is a great skin maintenance treatment. It is recommended that the procedure be done once a month to keep the skin vibrant and healthy.

Pre-Procedure:

- DO NOT use Retin-A or other exfoliating creams, 24 to 48 hours prior to your treatment.
- Avoid sun tanning, tanning lotions or spray tans for at least 1 week before the treatment.
- Prospective patients should also refrain from waxing or tanning the skin to be treated for a few weeks, prior to Microdermabrasion.

Post-Procedure:

- Use a gentle cleanser and gentle moisturizer to keep the newly revealed skin clean.
- Avoid irritating the treated skin by rubbing, tanning or applying harsh chemicals for 1 week.
- Although peeling may occur in the treated areas, moisturizer should help minimize this effect.
- Avoid direct sun exposure after the treatment to prevent UV rays from slowing down your recovery and damaging your skin.
- DO NOT use glycolic, alpha hydroxy, beta hydroxy, retinol, benzoyl peroxide, or topical acne medications for 24 to 48 hours following the Microdermabrasion treatment.
- You may resume prescription retinoid products 3 to 7 days after the microdermabrasion treatment, or as instructed by your technician.

Microdermabrasion:

A minimally invasive procedure, used to renew overall skin tone and texture. A medical device is used to slough off or exfoliate the superficial dead skin of the epidermis. This treatment can improve:

- **Product Penetration**
